Report Lofthus frukt og saft

In this assignment I started doing research of witch people I would need on this project. The people I chose to have with me was a project manager, visual designer, back-end developer, front-end developer, copywriter/content specialist, interaction designer and marketing manager. When I figured out what and who, I started put each and one in different tasks and some tasks together. Then I started doing research about what kind of tasks every single one chood do, and what to do together. Like the project manager is the manger for the whole project. Visual designer taking care of the sketches, color, photos and elements. Back-end developer fore adding responsive HTML AND CSS, making changes and edit. Front-end developer fore adding basic HTML/CSS, mobile response and design. Copywriter for finding text/articles and how many pages that would look okay. Interaction designer for testing the website. Marketing manager for marketing and social media. First of all, everyone is in one the meeting and research with customer, to plan what everyone is going to do. The same as when we are meeting to present the plan fore customer, everyone is in. At the final end the project manager is the one who deliver the project.

When I made the Gantt-Chart I couldn't put everyone in because of the beta version, the one who's missing is Interaction Designer. (The pink one in Gantt), And Marketing Manager, (The brown one in Gantt).

First when I started using team Gantt I couldn't figure out how to do it, but after watching video and reading I saw it was really effective and creative way to keep everyone in the same project and se how every single one is doing. Using of time, how easy to change and that everyone can see how its going.
